

JXC5H/6H series

How to set the parameter version for LEFS#F

JXC5H/6H can be used by writing the actuator mounting posture (horizontal, vertical), transport weight, and parameters for each speed (7 types) in JXC-BCW.

Since the parameter version and operating conditions are described below, set the parameter version that matches the operating conditions in the parameter conditions and write.

Figure 1 Parameter condition input screen

Table 1 Parameter version and operating conditions

Parameter No	Operating conditions			
	Mounting posture	Transport weight	Speed	Acceleration
1. 01	Horizontal	Heavy	Low speed	3000mm/s2
1. 02			↓	
1. 03			↓	
1. 04			High speed	
1. 05		Light	Low speed	9800mm/s2
1. 06			High speed	
1. 07	Vertical	Common setting		
1. 00	Factory default			

For the JXC5H/6H series, parameters can be rewritten with JXC-BCW even with controllers other than the blank controller (JXC5H/6H*-BC).

Write parameters to a controller other than the blank controller (JXC5H/6H*-BC)

When using, write the parameters of the actuator that matches the controller part number.

ex) Controller part number JXC5H71-LEFS25FA-200

Compatible actuator part number
