Stainless Steel 316 Insert Fittings

Series KFG

A reliable seal Holds the tube tightly

Insert

An insert mechanism can provide reliable retaining force on tubes made of a wide variety of materials

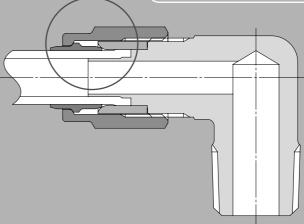

Superior tube mounting

Union nut

- No need to remove nuts
- Tube can be installed as-is
- Light tightening, and adhesion prevention as well

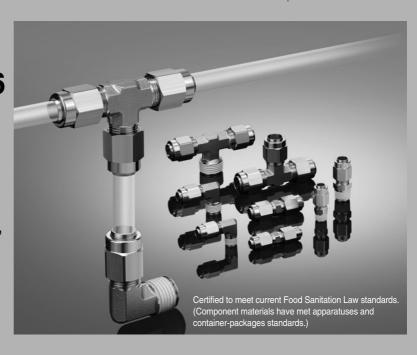

Tube holder

- Prevents tubes from being disconnected during piping
- A strong feeling when inserting tube

Material: Stainless steel 316

- Max. operating temperature 150°C
- Applicable tubing material
 FEP, PFA, Modified PTFE,
 Nylon, Soft nylon, Polyurethane,
 Polyolefin, Soft polyolefin
- Can be used with steam.
- Grease-free

Male Connector: KFGH

Series KFG Specific Product Precautions

Be sure to read this before handling. Refer to front matters 58 and 59 for Safety Instructions and pages 13 to 16 for Fittings and Tubing Precautions.

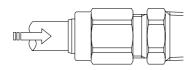

Selection

 Consult with SMC regarding fluids other than air, water and steam.

Installation and Removal of Tubing

⚠ Caution

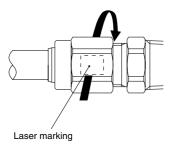

- 1. Installation of tubing
 - Take a tube having no flaws on its periphery and cut it off at a right angle. When cutting the tubing, use tubing cutters TK-1, 2 or 3. Do not use pinchers, nippers or scissors, etc. The tubing might be cut diagonally or flattened, making installation impossible or causing problems such as disconnection and leakage.
 - 2) Without loosening the union nut, grab the tube and gently push it thoroughly into the fitting.
 - 3) After insertion, confirm that the tube will not disconnect.

- 4) When the union is loose, tighten it additionally, temporarily by hand.
- 5) After fixing the body with the tightening tool, tighten the union nut by 1.5 turns, using an appropriate wrench. Shown below is the equivalent tightening torque.

Fitting size	Equivalent tightening torque N•m		
KFG□0425	7 to 9		
KFG□0604	11 to 13		
KFG□0806	13 to 15		
KFG□1075	16 to 18		
KFG□1209	16 to 18		

When tightening the nut, the laser marking can be used for reference.

Operating Environment

Marning

 Do not use in environments or locations where there is a danger of damage to fittings and tubing.

For fitting and tubing materials, refer to specifications and construction drawings, etc.

Maintenance

⚠ Caution

1. Pre-maintenance inspection

When the product is removed, turn off the power, cut off the supply pressure, and confirm that fluid in the piping has been discharged.

- 2. During regular maintenance, check for the following and replace any components as necessary.
 - a) Scratches, gouges, abrasion, corrosion
 - b) Leakage
 - c) Flattening or distortion of tubing
 - d) Hardening, deterioration or softness of tubing
- 3. Do not repair the fittings or patch the tubing for reuse.
- Using this product for extended periods of time can result in leaks due to the material change. In such cases, tighten the union nut additionally.

A guide for the additional tightening is 1/6 to 1/4 turns. The limit for additional tightening is 1/2 turns.

When there is a leak even after additional tightening, replace the sleeve and union nuts with new ones.

Also, the outside diameter of tubes that have been used at high temperatures or for long periods of time will expand, and in some cases pipe fittings cannot be reattached. Tubes that cannot be attached should be discarded and replaced with new ones.

5. Sleeve is not recyclable.

Replace it every time piping is performed.

Body and union nut are recyclable. Refer to the table below for recyclable life.

Recyclable Life for Body and Union Nut

	Recyclable life				
Series	Series Material				
TH	FEP				
TL	PFA	5 times			
TD	Modified PTFE				
Т	Nylon
