Step motor (Servo/24 VDC) LECP6

Servo motor (24 VDC) LECA6

## <When a PC is used>

 Controller setting software- Step data setting, test drive, jogging and move for the constant rate can be set and operated on one screen.

<When a TB (teaching box) is used>
- Simple screen without scrolling promotes ease of setting and operating.
- Pick up an icon from the first screen to select a function.
- Set up the step data and check the monitor on the second screen.

Example of setting the step data

It can be registered by "SET" after entering the values.

Example of checking the operation status

Operation status can be checked.

Teaching box screen

- Data can be set with position and speed. (Other conditions are already set.)

| Step | Axis 1 |
| :--- | :---: |
| Step No. | 0 |
| Posn | 50.00 mm |
| Speed | $200 \mathrm{~mm} / \mathrm{s}$ |

| Step | Axis 1 |
| :--- | :---: |
| Step No. | 1 |
| Posn | 80.00 mm |
| Speed | $100 \mathrm{~mm} / \mathrm{s}$ |

## © Normal Mode for Detailed Setting

Select normal mode when detailed setting is required.

- Step data can be set in detail.
- Parameters can be set.
- Signals and terminal status can be monitored.
- JOG and constant rate movement, return to origin, test drive and testing of forced output can be performed.

## <When a PC is used> Controller setting software

- Step data setting, parameter setting, monitor, teaching, etc., are indicated in different windows.

The actuator and controller are provided as a set. (They can be ordered separately.)
Confirm that the combination of the controller and the actuator is correct.
<Check the following before use.>
(1) Check the actuator label for model number. This matches the controller.
(2) Check Parallel I/O configuration matches (NPN or PNP).

## Fieldbus Network

## CC-Link Direct Input Type Step Motor Controller <br> LECPMJ Series CPase 600

©CC-Link Ver. 1.10 compliant
© External data import function

- The step data can be rewrite temporarily by feeding back external information to the PLC. 64 or more data points can be defined with the 3 types of data import modes.

Operation example: The opening width of the electric gripper is changed appropriately according to the results of the measurement with the imaging camera.

- 3 types of data import modes

Single numeric parameter (Number of occupied stations: 1) Movement MOD (movement mode) and another parameter item are changed.
Half numeric parameters (Number of occupied stations: 2) Up to 6 parameter items are changed at once.
Full numeric parameters (Number of occupied stations: 4) Up to 12 parameter items are changed at once.Position and speed can be monitored by the PLC touch panel (display).Step data can be edited from the PLC touch panel (display). (Except in the case of the single numeric parameter)
Function that can be executed in each mode

| Mode setting | Single numeric parameter | Half numeric parameters | Full numeric parameters |  |
| :--- | :---: | :---: | :---: | :---: |
| Number of definable numerical data items | 1 | 6 | 12 |  |
| Number of occupied stations | 1 | 2 | 4 |  |
| Max. number of connectable controllers | 42 | 32 | 16 |  |
| Step no. defining operation |  | $\bigcirc$ |  |  |
| Numerical data defining operation |  | $\bigcirc$ |  |  |
| Monitor of position/speed |  |  |  |  |
| Step data editing |  |  |  |  |

## Fieldbus Network

## Fieldbus-compatible Gateway (GW) Unit

## LEC-G Series PPage 572

## Conversion unit for Fieldbus network and LEC serial communication

## © Two methods of operation

Step data input: Operate using preset step data in the controller.
Numerical data input: The actuator operates using values such as position and speed from the PLC.Values such as position, speed can be checked on the PLC.

## Programless Type LECP1 Series •Page 576

## No Programming

Capable of setting up an electric actuator operation without using a PC or teaching box

## Pulse Input Type LECPA Series $\bullet$ Page 590

- A driver that uses pulse signals to allow positioning at any position. The actuator can be controlled from the customers' positioning unit.

- Return-to-origin command signal

Enables automatic return-to-origin action.

- With force limit function (Pushing force/Gripping force operation available)

Pushing force/Positioning operation possible by switching signals.

## Programless Type (with Stroke Study) LECP2 series •Page 583

## Stroke end operation similar to an air cylinder is possible.

(using the 1 stroke study and 2 reduced wiring below)

Step motor (Servo/24 VDC) LECP2

## Stroke study (Simple registration of both stroke end positions)

After the stroke adjustment unit has travelled, both stroke ends are automatically registered by the stroke study function!
(1) Setting position number

Set the position selecting switch to $15(\mathrm{~F})$.

(2) The stroke study begins

Press the SET button for 3 seconds or longer.

․III> Automatic registration of both end positions

## Wiring (Reduced wiring)

2-wire input signals*

* Both stroke end positions and an intermediate position can be set using this wiring.

Speed/Acceleration
16-level adjustment

|  | Axis $4 * 1$ |  | 0 | 25.00 | 0 | 0 | 0 | 0 | 0 | 100.0 | 0 | 0 | 0.5 |  |

*1 When circular interpolation (CIR-R, CIR-L, CIR-3) is selected in the movement mode, input the $X$ and $Y$ coordinates in the rotation center position or input the X and Y coordinates in the passing position.

| Movement mode | Pushing operation | Details |
| :---: | :---: | :---: |
| Blank | $\times$ | Invalid data (Invalid process) |
| ABS | $\bigcirc$ | Moves to the absolute coordinate position based on the origin of the actuator |
| INC | $\bigcirc$ | Moves to the relative coordinate position based on the current position |
| LIN-A | $\times$ | Moves to the absolute coordinate position based on the origin of the actuator by linear interpolation |
| LIN-I | $\times$ | Moves to the relative coordinate position based on the current position by linear interpolation |
| CIR-R*2 | $\times$ | With Axis 1 assigned to the X -axis and Axis 2 to the Y -axis, it moves in the clockwise direction by circular interpolation. The target position and rotation center position are specified according to the relative coordinates from the current position. The position data is assigned as follows. <br> Axis 1: Target position $X$ <br> Axis 2: Target position $Y$ <br> Axis $3 * 1$ : Rotation center position $X$ <br> Axis $4 * 1$ : Rotation center position $Y$ |
| CIR-L*2 | $\times$ | With Axis 1 assigned to the X -axis and Axis 2 to the Y -axis, it moves in the counter-clockwise direction by circular interpolation. The target position and rotation center position are specified according to the relative coordinates from the current position. The position data is assigned as follows. <br> Axis 1: Target position $X$ <br> Axis 2: Target position $Y$ <br> Axis $3 * 1$ : Rotation center position $X$ <br> Axis $4 * 1$ : Rotation center position $Y$ |
| SYN-I | $\times$ | Moves to the relative coordinate position based on the current position by speed tuning control *3 |
| CIR-3*2 | $\times$ | With Axis 1 assigned to the X -axis and Axis 2 to the Y -axis, it moves based on the three specified points by circular interpolation. The target position and passing position are specified according to the relative coordinates from the current position. The position data is assigned as follows. <br> Axis 1: Target position $X$ <br> Axis 2: Target position $Y$ <br> Axis 3 *1: Passing position $X$ <br> Axis $4 * 1$ : Passing position $Y$ |

*2 Performs a circular operation on a plane using Axis 1 and Axis 2
*3 This controls the speed of the slave axis when the speed of the main axis drops due to the effects of an external force and when a speed difference with the slave axis occurs. This control is not for synchronizing the position of the main axis and slave axis.

## For 4 Axes <br> 4-axis operation can be set collectively in one step.

| Step | Axis | Movement mode | Speed | Position | Acceleration | Deceleration | Positioning/ Pushing | Area 1 | Area 2 | In position | Comments |

# Controller (Step Data Input Type) Step Motor (Servo/24 VDC) 

 LECP6 Series Servo Motor (24 VDC) LECA6 Series
## How to Order

## $\triangle$ Caution

[CE-compliant products]
(1) EMC compliance was tested by combining the electric actuator LE series and the controller LEC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
(2) For the LECA6 series (servo motor controller), EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 568 for the noise filter set. Refer to the LECA Operation Manual for installation. [UL-compliant products]
When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

* When controller equipped type is selected when ordering the LE series, you do not need to order this controller.

## The controller is sold as single unit after the compatible actuator is set.

Confirm that the combination of the controller and the actuator is correct.
<Check the following before use.>
(1) Check the actuator label for model number. This matches the controller.
(2) Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, http://www.smcworld.com

## Precautions on blank controller (LEC $\square 6 \square \square$-BC)

Blank controller is a controller to which the customer can write the data of the actuator to be combined and used. Use the dedicated software (LEC-BCW) for data writing.

- Please download the dedicated software (LEC-BCW) via our website.
- Order the communication cable for controller setting (LEC-W2A-C) separately to use this software.

SMC website
https://www.smcworld.com

## Specifications

## Basic Specifications

| Item | LECP6 | LECA6 |
| :---: | :---: | :---: |
| Compatible motor | Step motor (Servo/24 VDC) | Servo motor (24 VDC) |
| Power supply Note 1) | Power voltage: 24 VDC $\pm 10 \%$ Note 2) [Including motor drive power, control power, stop, lock release] | Power voltage: 24 VDC $\pm 10 \%$ Note 2) [Including motor drive power, control power, stop, lock release] |
| Parallel input | 11 inputs (Photo-coupler isolation) |  |
| Parallel output | 13 outputs (Photo-coupler isolation) |  |
| Compatible encoder | Incremental A/B phase (800 pulse/rotation) | Incremental A/B (800 pulse/rotation)/Z phase |
| Serial communication | RS485 (Modbus protocol compliant) |  |
| Memory | EEPROM |  |
| LED indicator | LED (Green/Red) one of each |  |
| Lock control | Forced-lock release terminal Note 3) |  |
| Cable length [m] | I/O cable: 5 or less, Actuator cable: 20 or less |  |
| Cooling system | Natural air cooling |  |
| Operating temperature range $\left.{ }^{\circ} \mathrm{C}\right]$ | 0 to 40 (No freezing) |  |
| Operating humidity range [\%RH] | 90 or less (No condensation) |  |
| Storage temperature range $\left[{ }^{\circ} \mathrm{C}\right]$ | -10 to 60 (No freezing) |  |
| Storage humidity range [\%RH] | 90 or less (No condensation) |  |
| Insulation resistance [M 2 ] | Between the housing and SG terminal: 50 (500 VDC) |  |
| Weight [g] | 150 (Screw mounting), 170 (DIN rail mounting) |  |
| Note 1) Do not use the controller power s tuator and control | wer supply of "inrush current prevention type" for the upply. When conformity to UL is required, the electric acer should be used with a UL1310 Class 2 power supply. <br> Note 2) <br> Note 3) | The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details. Applicable to non-magnetizing lock. |

## How to Mount

a) Screw mounting (LEC $\square 6 \square \square-\square$ ) (Installation with two M4 screws)

b) DIN rail mounting (LEC $\square 6 \square \square \mathrm{D}-\square$ ) (Installation with the DIN rail)
 the lever of section $\mathbf{A}$ in the arrow direction to lock it.

Note) When size 25 or more of the LE series are used, the space between the controllers should be 10 mm or more.

## DIN rail <br> AXT100-DR- $\square$

* For $\square$, enter a number from the "No." line in the table below. Refer to the dimensions on page 562 for the mounting dimensions.

L Dimension [mm]

| No. | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{L}$ | 23 | 35.5 | 48 | 60.5 | 73 | 85.5 | 98 | 110.5 | 123 | 135.5 | 148 | 160.5 | 173 | 185.5 | 198 | 210.5 | 223 | 235.5 | 248 | 260.5 |
| No. | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 | 32 | 33 | 34 | 35 | 36 | 37 | 38 | 39 | 40 |
| $\mathbf{L}$ | 273 | 285.5 | 298 | 310.5 | 323 | 335.5 | 348 | 360.5 | 373 | 385.5 | 398 | 410.5 | 423 | 435.5 | 448 | 460.5 | 473 | 485.5 | 498 | 510.5 |

## DIN rail mounting adapter

## LEC-DO (with 2 mounting screws)

This should be used when the DIN rail mounting adapter is mounted onto the screw mounting type controller afterwards.

## LEC $\square \mathbf{6 P \square \square - \square ~ ( P N P ) ~}$

## Output Signal

| Name | Details |
| :---: | :---: |
| OUT0 to OUT5 | Outputs the step data no. during operation |
| BUSY | Outputs when the actuator is moving |
| AREA | Outputs within the step data area output setting range |
| SETON | Outputs when returning to origin |
| INP | Outputs when target position or target force is reached <br> (Turns on when the positioning or pushing is completed.) |
| SVRE | Outputs when servo is on |
| *ESTOP Note) | Not output when EMG stop is instructed |
| *ALARM Note) | Not output when alarm is generated |

[^0]
## LECP6 Series LECA6 Series

## Step Data Setting

## 1. Step data setting for positioning

In this setting, the actuator moves toward and stops at the target position.
The following diagram shows the setting items and operation. The setting items and set values for this operation are stated below.

| Step Data (Positioning) |  | © : Need to be set. <br> O: Need to be adjusted as required. <br> -: Setting is not required. |
| :---: | :---: | :---: |
| Necessity | Item | Details |
| © | Movement MOD | When the absolute position is required, set Absolute. When the relative position is required, set Relative. |
| ( $)$ | Speed | Transfer speed to the target position |
| () | Position | Target position |
| $\bigcirc$ | Acceleration | Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set. |
| $\bigcirc$ | Deceleration | Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops. |
| © | Pushing force | Set 0 . <br> (If values 1 to 100 are set, the operation will be changed to the pushing operation.) |
| - | Trigger LV | Setting is not required. |
| - | Pushing speed | Setting is not required. |
| $\bigcirc$ | Moving force | Max. torque during the positioning operation (No specific change is required.) |
| $\bigcirc$ | Area 1, Area 2 | Condition that turns on the AREA output signal. |
| $\bigcirc$ | In position | Condition that turns on the INP output signal. When the actuator enters the range of [in position], the INP output signal turns on. (It is unnecessary to change this from the initial value.) When it is necessary to output the arrival signal before the operation is completed, make the value larger. |

## 2. Step data setting for pushing

The actuator moves toward the pushing start position, and when it reaches that position, it starts pushing with the set force or less.
The following diagram shows the setting items and operation. The setting items and set values for this operation are stated below.

| Step Data (Pushing) |  | Need to be set. Need to be adjusted as required. |
| :---: | :---: | :---: |
| Necessity | Item | Details |
| © | Movement MOD | When the absolute position is required, set Absolute. When the relative position is required, set Relative. |
| © | Speed | Transfer speed to the pushing start position |
| () | Position | Pushing start position |
| $\bigcirc$ | Acceleration | Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set. |
| $\bigcirc$ | Deceleration | Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops. |
| © | Pushing force | Pushing force ratio is defined. <br> The setting range differs depending on the electric actuator type. Refer to the operation manual for the electric actuator. |
| © | Trigger LV | Condition that turns on the INP output signal. The INP output signal turns on when the generated force exceeds the value. Trigger level should be the pushing force or less. |
| $\bigcirc$ | Pushing speed | Pushing speed during pushing. <br> When the speed is set fast, the electric actuator and workpieces might be damaged due to the impact when they hit the end, so this set value should be smaller. Refer to the operation manual for the electric actuator. |
| $\bigcirc$ | Moving force | Max. torque during the positioning operation (No specific change is required.) |
| $\bigcirc$ | Area 1, Area 2 | Condition that turns on the AREA output signal. |
| © | In position | Transfer distance during pushing. If the transferred distance exceeds the setting, it stops even if it is not pushing. If the transfer distance is exceeded, the INP output signal will not turn on. |

Signal Timing

## Return to Origin

* "*ALARM" and "*ESTOP" are expressed as negative-logic circuit.

* "OUT" is output when "DRIVE" is changed from ON to OFF.

Refer to the operation manual for details on the controller for the LEM series. (When power supply is applied, "DRIVE" or "RESET" is turned ON or "*ESTOP" is turned OFF, all of the "OUT" outputs are OFF.)

## HOLD

[^1] does not stop even if HOLD signal is input.

## Screen Example

Easy mode screen example

## Easy operation and simple setting

- Allowing to set and display actuator step data such as position, speed, force, etc.
- Setting of step data and test drive can be performed on the same page.
- Can be used to jog and move at a constant rate.

Normal mode screen example

Detailed setting

- Step data can be set in detail.
- Signals and terminal status can be monitored.
- Parameters can be set.
- JOG and constant rate movement, return to origin, test drive and testing of forced output can be performed.

## LEC Series <br> Teaching Box/LEC-T1

RoHS

## How to Order

Standard functions

- Chinese character display
- Stop switch is provided.

## Option

- Enable switch is provided.

* The displayed language can be changed to English or Japanese.

Specifications

| Item | Description |
| :--- | :---: |
| Switch | Stop switch, Enable switch (Option) |
| Cable length [m] | 3 |
| Enclosure | IP64 (Except connector) |
| Operating temperature range $\left[{ }^{\circ} \mathbf{C}\right]$ | 5 to 50 |
| Operating humidity range [\%RH] | 90 or less (No condensation) |
| Weight [g] | 350 (Except cable) |

[CE-compliant products]
The EMC compliance of the teaching box was tested with the LECP6 series step motor controller (servo/24 VDC) and an applicable actuator.
[UL-compliant products]
When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

# Gateway Unit LEC-G Series 

## $\triangle$ Caution

[CE-compliant products] EMC compliance was tested by combining the electric actuator LE series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
[UL-compliant products] When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Note 1) Please note that the version is subject to change.
Note 2) Each file can be downloaded from the SMC website, http://www.smcworld.com
Note 3) When using a teaching box (LEC-T1- $\square$ ), set the communication speed to 115.2 kbps.
Note 4) A communication response time for 1 controller is approximately 30 ms .
Refer to "Communication Response Time Guideline" for response times when several controllers are connected.
Note 5) For step data input, up to 12 controllers connectable.
Note 6) When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

## Communication Response Time Guideline

Response time between gateway unit and controllers depends on the number of controllers connected to the gateway unit. For response time, refer to the graph below.

* This graph shows delay times between gateway unit and controllers. Fieldbus network delay time is not included.

| OV | Power supply - terminal |  |

Power supply plug for LEC-G: LEC-D-1-1

How to Order

## Caution

[CE-compliant products]
EMC compliance was tested by combining the electric actuator LE series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
[UL-compliant products]
When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

The controller is sold as single unit after the compatible actuator is set.
Confirm that the combination of the controller and the actuator is correct.

* Refer to the operation manual for using the products. Please download it via our website, http://www.smcworld.com

## Specifications

## Basic Specifications

| Item | LECP1 |
| :---: | :---: |
| Compatible motor | Step motor (Servo/24 VDC) |
| Power supply Note 1) | Power supply voltage: 24 VDC $\pm 10 \%$ Note 2 ) <br> [Including the motor drive power, control power supply, stop, lock release] |
| Parallel input | 6 inputs (Photo-coupler isolation) |
| Parallel output | 6 outputs (Photo-coupler isolation) |
| Stop points | 14 points (Position number 1 to 14(E)) |
| Compatible encoder | Incremental A/B phase (800 pulse/rotation) |
| Memory | EEPROM |
| LED indicator | LED (Green/Red) one of each |
| 7-segment LED display Note 3) | 1 digit, 7-segment display (Red) Figures are expressed in hexadecimal ("10" to "15" in decimal number are expressed as "A" to "F") |
| Lock control | Forced-lock release terminal Note 4) |
| Cable length [m] | I/O cable: 5 or less, Actuator cable: 20 or less |
| Cooling system | Natural air cooling |
| Operating temperature range [ ${ }^{\circ} \mathrm{C}$ ] | 0 to 40 (No freezing) |
| Operating humidity range [\%RH] | 90 or less (No condensation) |
| Storage temperature range [ ${ }^{\circ} \mathrm{C}$ ] | -10 to 60 (No freezing) |
| Storage humidity range [\%RH] | 90 or less (No condensation) |
| Insulation resistance [M 2 ] | Between the housing and SG terminal: 50 (500 VDC) |
| Weight [g] | 130 (Screw mounting), 150 (DIN rail mounting) |

Note 1) Do not use the power supply of "inrush current prevention type" for the controller input power supply. When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.
Note 2) The power consumption changes depending on the actuator model. Refer to the each actuator's operation manual etc. for details.
Note 3) " 10 " to " 15 " in decimal number are displayed as follows in the 7 -segment LED.

Note 4) Applicable to non-magnetizing lock.

## Controller Details

| No. | Display | Description | Details |
| :---: | :---: | :---: | :---: |
| (1) | PWR | Power supply LED | Power supply ON/Servo ON : Green turns on Power supply ON/Servo OFF: Green flashes |
| (2) | ALM | Alarm LED | With alarm : Red turns on <br> Parameter setting : Red flashes |
| (3) | - | Cover | Change and protection of the mode switch (Close the cover after changing switch) |
| (4) | - | FG | Frame ground (Tighten the screw with the washer when mounting the controller. Connect the ground wire.) |
| (5) | - | Mode switch | Switch the mode between manual and auto. |
| (6) | - | 7-segment LED | Stop position, the value set by (8) and alarm information are displayed. |
| (7) | SET | Set button | Decide the settings or drive operation in Manual mode. |
| (8) | - | Position selecting switch | Assign the position to drive (1 to 14), and the origin position (15). |
| (9) | MANUAL | Manual forward button | Perform forward jog and inching. |
| (10) |  | Manual reverse button | Perform reverse jog and inching. |
| (11) | SPEED | Forward speed switch | 16 forward speeds are available. |
| (12) | SPEED | Reverse speed switch | 16 reverse speeds are available. |
| (13) | AC | Forward acceleration switch | 16 forward acceleration steps are available. |
| (14) |  | Reverse acceleration switch | 16 reverse acceleration steps are available. |
| (15) | CN1 | Power supply connector | Connect the power supply cable. |
| (16) | CN2 | Motor connector | Connect the motor connector. |
| (17) | CN3 | Encoder connector | Connect the encoder connector. |
| (18) | CN4 | I/O connector | Connect I/O cable. |

## How to Mount

Controller mounting shown below.

## 1. Mounting screw (LECP1 $\square \square-\square$ )

(Installation with two M4 screws)

## 2. Grounding

Tighten the screw with the washer when mounting the ground wire as shown below.

Note) When size 25 or more of the LE series are used, the space between the controllers should be 10 mm or more.

## $\triangle$ Caution

$\bullet$ M4 screws, cable with crimping terminal and tooth lock washer are not included. Be sure to carry out grounding earth in order to ensure the noise tolerance.

- Use a watchmaker's screwdriver of the size shown below when changing position switch (8) and the set value of the speed/acceleration switch (11) to (14).

[^2]

## How to Mount

## Controller mounting shown below

## 1. Screw mounting (LECP2 $\square \square-\square$ )

(Installation with two M4 screws)

Note) The space between the controllers should be 10 mm or more.

## 2. Grounding

Tighten the screw with the washer when mounting the ground wire as shown below.

Controller

## $\triangle$ Caution

$\bullet$ M4 screws, cable with crimping terminal and tooth lock washer are not included. Be sure to carry out grounding earth in order to ensure the noise tolerance.

- Use a watchmaker's screwdriver of the size shown below when changing position switch (8) and the set value of the speed/acceleration switch (11) to (14).

## Size

L: 2.0 to $2.4[\mathrm{~mm}]$
End width thickness W: 0.5 to $0.6[\mathrm{~mm}]$

[^5]
## $\triangle$ Caution

## [CE-compliant products]

(1) EMC compliance was tested by combining the electric actuator LE series and the LECPA series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
(2) For the LECPA series (step motor driver), EMC compliance was tested by installing a noise filter set (LEC-NFA).
Refer to page 568 for the noise filter set. Refer to the LECPA Operation Manual for installation.

## [UL-compliant products]

When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

Note) The dedicated software (LEC-BCW) is required.

* When controller equipped type is selected when ordering the LE series, you do not need to order this driver. * When pulse signals are open collector, order the current limiting resistor (LEC-PA-R- $\square$ ) separately.

## The driver is sold as single unit after the compatible actuator is set.

Confirm that the combination of the driver and the actuator is correct.

## <Check the following before use.>

(1) Check the actuator label for model number. This matches the driver.
(2) Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, http://www.smcworld.com

## Precautions on blank controller (LECPA $\square \square-B C)$

Blank controller is a controller to which the customer can write the data of the actuator to be combined and used. Use the dedicated software (LEC-BCW) for data writing.

- Please download the dedicated software (LEC-BCW) via our website.
- Order the communication cable for controller setting (LEC-W2A-C) separately to use this software.

SMC website
https://www.smcworld.com

## Specifications

| Item | LECPA |
| :---: | :---: |
| Compatible motor | Step motor (Servo/24 VDC) |
| Power supply Note 1) | Power voltage: 24 VDC $\pm 10 \%$ Note 2) [Including motor drive power, control power, stop, lock release] |
| Parallel input | 5 inputs (Except photo-coupler isolation, pulse input terminal, COM terminal) |
| Parallel output | 9 outputs (Photo-coupler isolation) |
| Pulse signal input | Maximum frequency: 60 kpps (Open collector), 200 kpps (Differential) Input method: 1 pulse mode (Pulse input in direction), 2 pulse mode (Pulse input in differing directions) |
| Compatible encoder | Incremental A/B phase (Encoder resolution: 800 pulse/rotation) |
| Serial communication | RS485 (Modbus protocol compliant) |
| Memory | EEPROM |
| LED indicator | LED (Green/Red) one of each |
| Lock control | Forced-lock release terminal ${ }^{\text {Note } 3)}$ |
| Cable length [m] | I/O cable: 1.5 or less (Open collector), 5 or less (Differential), Actuator cable: 20 or less |
| Cooling system | Natural air cooling |
| Operating temperature range [ ${ }^{\circ} \mathrm{C}$ ] | 0 to 40 (No freezing) |
| Operating humidity range [\%RH] | 90 or less (No condensation) |
| Storage temperature range [ ${ }^{\circ} \mathrm{C}$ ] | -10 to 60 (No freezing) |
| Storage humidity range [\%RH] | 90 or less (No condensation) |
| Insulation resistance [ $\mathrm{M} \Omega$ ] | Between the housing and SG terminal: 50 (500 VDC) |
| Weight [g] | 120 (Screw mounting), 140 (DIN rail mounting) |

Note 1) Do not use the power supply of "inrush current prevention type" for the Note 2) The power consumption changes depending on the actuator driver power supply. When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

## How to Mount

Note) The space between the drivers should be 10 mm or more.

## DIN rail

## AXT100-DR- $\square$

* For $\square$, enter a number from the "No." line in the table below. Refer to the dimensions on page 592 for the mounting dimensions.

* Select a current limiting resistor that corresponds to the pulse signal power supply voltage.
* For the LEC-PA-R- $\square$, two pieces are shipped as a set.
* For pulse signal wiring details, refer to page 593.

## LEC Series

## Communication Cable for Controller Setting/LEC-W2A- $\square$

Compatible Controller/Driver

| Step data input type | LECP6 Series/LECA6 Series |
| :--- | :--- |
| Pulse input type | LECPA Series |
| cC-Link direct input type | LECPMJ Series |
| Step Motor Controller | JXCE1/91/P1/D1/L1 Series |

* When connecting to a JXCE1/91/P1/D1/L1 series product, use a conversion cable (P5062-5) as a relay.

Hardware Requirements

| OS | Windows $^{\circledR} 7$, Windows ${ }^{\circledR} 8.1$, Windows $^{\circledR 10} 10$ |
| :--- | :--- |
| Communication <br> interface | USB 1.1 or USB 2.0 ports |
| Display | $1024 \times 768$ or more |

* Windows ${ }^{\circledR 7}$, Windows ${ }^{\circledR 8.1}$ and Windows ${ }^{\circledR 10}$ are registered trademarks of Microsoft Corporation in the United States.

## Screen Example

Easy mode screen example

## Easy operation and simple setting

- Allowing to set and display actuator step data such as position, speed, force, etc.
- Setting of step data and test drive can be performed on the same page.
- Can be used to jog and move at a constant rate.

Normal mode screen example

Detailed setting

- Step data can be set in detail.
- Signals and terminal status can be monitored.
- Parameters can be set.
- JOG and constant rate movement, return to origin, test drive and testing of forced output can be performed.

## LEC Series <br> Teaching Box/LEC-T1

## How to Order

Standard functions

- Chinese character display
- Stop switch is provided.

## Option

- Enable switch is provided.

* The displayed language can be changed to English or Japanese.

Specifications

| Item | Description |
| :--- | :---: |
| Switch | Stop switch, Enable switch (Option) |
| Cable length [m] | 3 |
| Enclosure | IP64 (Except connector) |
| Operating temperature range $\left[{ }^{\circ} \mathbf{C}\right]$ | 5 to 50 |
| Operating humidity range [\%RH] | 90 or less (No condensation) |
| Weight [g] | 350 (Except cable) |

[CE-compliant products]
The EMC compliance of the teaching box was tested with the LECP6 series step motor controller (servo/24 VDC) and an applicable actuator.
[UL-compliant products]
When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

ROHS

How to Order

Communication plug connectior

* Part number that is used when ordering the communication plug connector individually.

Connector type

| S | Straight type |
| :---: | :---: |
| T | T-branch type |

Straight type
LEC-CMJ-S

T-branch type LEC-CMJ-T

The controller is sold as single unit after the compatible actuator is set.
Confirm that the combination of the controller and the actuator is correct.
(1) Check the actuator label for model number. This matches the controller.

* Refer to the operation manual for using the products. Please download it via our website, http://www.smcworld.com

## Precautions on blank controller (LECPMJ $\square \square$-BC)

Blank controller is a controller to which the customer can write the data of the actuator to be combined and used. Use the dedicated software (LEC-BCW) for data writing.

- Please download the dedicated software (LEC-BCW) via our website.
- Order the communication cable for controller setting (LEC-W2A-C) separately to use this software.

SMC website: https://www.smcworld.com

## Step Motor Controller (CC-Link Direct Input Type)

## Specifications

| Item |  |  | LECPMJ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Compatible motor |  |  | Step motor (Servo/24 VDC) |  |  |  |  |
| Power supply Note 1) |  |  | Power voltage: 24 VDC $\pm 10 \%$ Note 2) |  |  |  |  |
| Compatible encoder |  |  | Incremental A/B phase (800 pulse/rotation) |  |  |  |  |
|  | Fieldbus |  | CC-Link Ver. 1.10 |  |  |  |  |
|  | Communication speed [bps] |  | $156 \mathrm{k} / 625 \mathrm{k} / 2.5 \mathrm{M} / 5 \mathrm{M} / 10 \mathrm{M}$ |  |  |  |  |
|  | Communication method |  | Broadcast polling |  |  |  |  |
|  | Station type |  | Remote device station |  |  |  |  |
|  | I/O occupation area |  | 1 station$\binom{$ Input 32 points $/ 4$ words }{ Output 32 points $/ 4$ words } |  | $\left(\begin{array}{c} \text { Input } \\ \text { Output } \end{array}\right.$ | words words) | $\begin{gathered} 4 \text { stations } \\ \binom{\text { Input } 128 \text { points/16 words }}{\text { Output } 128 \text { points/16 words }} \end{gathered}$ |
|  | Applicable communication cable |  | CC-Link Ver. 1.10 compliant cable (Shielded 3-core twisted pair cable) ${ }^{\text {Note 3) }}$ |  |  |  |  |
|  | Maximum cable length | Communication speed [bps] | 156 k | 625 k | 2.5 M | 5 M | 10 M |
|  |  | Total cable length [m] | 1200 | 900 | 400 | 160 | 100 |
| Serial communication |  |  | RS485 (Modbus protocol) |  |  |  |  |
| Memory |  |  | EEPROM |  |  |  |  |
| LED indicator |  |  | PWR, ALM, L ERR, L RUN |  |  |  |  |
| Lock control |  |  | Forced-lock release terminal Note 4) |  |  |  |  |
| Cable length [m] |  |  | Actuator cable: 20 or less |  |  |  |  |
| Cooling system |  |  | Natural air cooling |  |  |  |  |
| Operating temperature range [ ${ }^{\mathrm{C}}$ ] |  |  | 0 to 40 (No freezing) |  |  |  |  |
| Operating humidity range [\%RH] |  |  | 90 or less (No condensation) |  |  |  |  |
| Storage temperature range [ ${ }^{\mathrm{C}}$ ] |  |  | -10 to 60 (No freezing) |  |  |  |  |
| Storage humidity range [\%RH] |  |  | 90 or less (No condensation) |  |  |  |  |
| Insulation resistance [M $\Omega$ ] |  |  | Between all of external terminals and the case$50 \text { (500 VDC) }$ |  |  |  |  |
| Weight [g] |  | ody | 170 (Screw mounting), 190 (DIN rail mounting) |  |  |  |  |
|  |  | Communication plug connector | 10 (Straight type), 20 (T-branch type) |  |  |  |  |

Note 1) Do not use the power supply of "inrush current prevention type" for the controller power supply.
When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.
Note 2) The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details.
Note 3) If the system comprises of both CC-Link Ver. 1.00 and Ver. 1.10 compliant cables, Ver. 1.00 specifications are applied to the maximum communication cable length and the cable length between stations.
Note 4) Applicable to non-magnetizing lock

## Mode explanation

| Mode type | Description |
| :--- | :--- |
| Single numeric <br> parameter | Can define numerical data in the Movement MOD and another item in the step data directly from the PLC when starting operation by <br> specifying a registered step data No. |
| Half numeric <br> parameters | Can define numerical data in the Movement MOD, Speed, Position, Acceleration/Pushing force, Pushing speed, or Deceleration/ <br> Trigger LV in the step data directly from the PLC when starting operation by specifying a registered step data No. |
| Full numeric <br> parameters | Can define numerical data in all step data items, Movement MOD, Speed, Position, Acceleration, Pushing speed, Pushing force, <br> Deceleration, Trigger LV, Moving force, Area 1, Area 2, and In position, directly from the PLC to start operation. |

Function that can be executed in each mode

| Mode setting [Number of occupied stations] ${ }^{\text {Note } 5 \text { ) }}$ | Single numeric parameter [1] | Half numeric parameters [2] | Full numeric parameters [4] |
| :---: | :---: | :---: | :---: |
| Step no. defining operation | $\bigcirc$ |  |  |
| Numerical data defining operation | $\bigcirc$ |  |  |
| Number of definable numerical data items | 1 | 6 | 12 |
| Monitor of position/speed | $\bigcirc$ |  |  |
| Step data editing | $\bigcirc^{\text {Note 6) }}$ |  |  |
| Max. number of connectable controllers ${ }^{\text {Note } 7)}$ | 42 | 32 | 16 |

Note 5) The modes can be set by registering the number of occupied stations with basic parameter "Option setting 1" of the controller.
Note 6) It is possible to edit it from teaching box/controller setting software for "Single numeric parameter". It is possible to edit it from teaching box/ controller setting software and PLC (CC-Link) for "Half numeric parameters" and "Full numeric parameters".
Note 7) Maximum number of units specified in CC-Link communication specifications.

## LECPMJ Series

## Specifications

## Modifiable step data item in each mode

- Numerical data modifiable items

| Mode setting | Step data item |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Movement } \\ & \text { MOD } \end{aligned}$ | Speed | Position | Acceleration | Pushing force | Pushing speed | Deceleration | Trigger LV | Moving force | Area 1 | Area 2 | $\stackrel{\text { In }}{\text { position }}$ |
| Single numeric parameter | - |  |  |  |  | Only one item ranging | can be changed tom Speed to In | from 11 items, position. |  |  |  |  |
| Half numeric parameters | $\bullet$ | $\bullet$ | - | Only one item can Acceleration | be changed from ushing force. | - | Only one item can Deceleration | $\xrightarrow{\xrightarrow[n]{n \text { be changed from }}}$ |  |  |  |  |
| Full numeric parameters | - | - | - | - | - | - | - | - | - | - | - | - |

Note) Step data items, except items that have been changed, reference data registered in the controller.
Note) Refer to the LECPMJ operation manual for details of the step data items.

## Operation example: Single numeric parameter

[Step data registered in LECPMJ]

| No. | Movement MOD | Speed | Position | Acceleration | Deceleration | Pushing force | Trigger LV | Pushing speed | Moving force | Area 1 | Area 2 | In position |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1: Absolute | 100 | 10 | 3000 | 3000 | 0 | 0 | 0 | 100 | 0 | 0 | 0.50 |
| 1 | 1: Absolute | 100 | 100 | 3000 | 3000 | 0 | 0 | 0 | 100 | 0 | 0 | 0.50 |
| 2 | 1: Absolute | 100 | 200 | 3000 | 3000 | 0 | 0 | 0 | 100 | 0 | 0 | 0.50 |

Note) The step data input range changes depending on the actuator model. For details, refer to the operation manual for actuator.
Note) To register the step data, use the controller setting software, teaching box, or data editing function of the LECPMJ.

## Precautions on blank controller (JXC $\square 1 \square \square-\mathrm{BC}$ )

Blank controller is a controller to which the customer can write the data of the actuator to be combined and used. Use the dedicated software (JXC-BCW) for data writing.

- Please download the dedicated software (JXC-BCW) via our website.
- Order the communication cable for controller setting (JXC-W2A-C) and USB cable (LEC-W2-U) separately to use this software.

SMC website: https://www.smcworld.com

*1 Please note that versions are subject to change.
*2 Use a shielded communication cable with CAT5 or higher for the PROFINET, EtherNet/IPTM, and EtherCAT ${ }^{\circledR}$.
*3 The files can be downloaded from the SMC website: http://www.smcworld.com
*4 The operating temperature range for both version 1 products and version 2 products is 0 to $40^{\circ} \mathrm{C}$.

## ■Trademark

EtherNet/IP ${ }^{\text {TM }}$ is a trademark of ODVA.
DeviceNet ${ }^{T M}$ is a trademark of ODVA.
EtherCAT ${ }^{\circledR}$ is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

## Example of Operation Command

In addition to the step data input of 64 points maximum in each communication protocol, the changing of each parameter can be performed in real time via numerical data defined operation.

* Numerical values other than "Moving force," "Area 1," and "Area 2" can be used to perform operation under numerical instructions from JXCL1.
<Application example> Movement between 2 points

| No. | Movement mode | Speed | Position | Acceleration | Deceleration | Pushing force | Trigger LV | Pushing speed | Moving force | Area 1 | Area 2 | In position |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1: Absolute | 100 | 10 | 3000 | 3000 | 0 | 0 | 0 | 100 | 0 | 0 | 0.50 |
| 1 | 1: Absolute | 100 | 100 | 3000 | 3000 | 0 | 0 | 0 | 100 | 0 | 0 | 0.50 |

## <Step no. defined operation>

Sequence 1: Servo ON instruction
Sequence 2: Instruction to return to origin
Sequence 3: Specify step data No. 0 to input the DRIVE signal.
Sequence 4: Specify step data No. 1 after the DRIVE signal has been temporarily turned OFF to input the DRIVE signal.

## <Numerical data defined operation>

Sequence 1: Servo ON instruction
Sequence 2: Instruction to return to origin
Sequence 3: Specify step data No. 0 and turn ON the input instruction flag (position). Input 10 in the target position. Subsequently the start flag turns ON. Sequence 4: Turn ON step data No. 0 and the input instruction flag (position) to change the target position to 100 while the start flag is ON.

The same operation can be performed with any operation command.

Conversion cable P5062-5 (Cable length: $\mathbf{3 0 0}$ mm)

* To connect the teaching box (LEC-T1-3 $\square \mathrm{G} \square$ ) or controller setting kit (LEC-W2) to the controller, a conversion cable is required.

## Precautions Related to Differences in Controller Versions

## JXCE1/91/P1/D1/L1 Series

As the controller version of the JXC series differs, the internal parameters are not compatible.
$\square$ If using the JXC $\square 1 \square-\mathrm{BC}$, please use the latest version of the JXC-BCW (parameter writing tool).
There are currently 3 versions available: version 1 products (V1. $\square$ or S1. $\square$ ), version 2 products (V2. $\square$ or S2. $\square$ ), and version 3 products (V3. $\square$ or S3. $\square$ ). Keep in mind that in order to write a backup file (.bkp) to another controller with the JXC-BCW, it needs to be the same version as the controller that created the file. (For example, a backup file created by a version 1 product can only be written to another version 1 product, and so on.)

## Identifying Version Symbols

## JXC $\square 1-X Z 23$ Series

Due to the difference in controller versions, the internal parameters of the $55^{\circ} \mathrm{C}$ specification ( $\mathrm{JXC} \square 1-\mathrm{XZ23}$ ) and the $40^{\circ} \mathrm{C}$ specification (standard model, JXC $\square 1$ ) are not compatible.
$\square$ If using the JXC $\square 1 \square-B C-X Z 23$, please use the latest version of the JXC-BCW (parameter writing tool).

## LEC Series <br> Teaching Box/LEC-T1

RoHS

How to Order

Standard functions

- Chinese character display
- Stop switch is provided.

## Option

- Enable switch is provided.

* The displayed language can be changed to English or Japanese.

Specifications

| Item | Description |
| :--- | :---: |
| Switch | Stop switch, Enable switch (Option) |
| Cable length [m] | 3 |
| Enclosure | IP64 (Except connector) |
| Operating temperature range $\left[{ }^{\circ} \mathbf{C}\right]$ | 5 to 50 |
| Operating humidity range [\%RH] | 90 or less (No condensation) |
| Weight [g] | 350 (Except cable) |

[CE-compliant products]
The EMC compliance of the teaching box was tested with the LECP6 series step motor controller (servo/24 VDC) and an applicable actuator.
[UL-compliant products]
When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

| Memory |  | Flash-ROM/EEPROM |
| LED indicator |  | PWR, RUN, USB, ALM, NS, MS, L/A, 100 |
| Lock control |  | Forced-lock release terminal *3 |
| Cable length |  | Actuator cable: 20 m or less |
| Cooling system |  | Natural air cooling |
| Operating temperature range |  | $0^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ (No freezing) |
| Operating humidity range |  | 90\% RH or less (No condensation) |
| Storage temperature range |  | $-10^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$ (No freezing) |
| Storage humidity range |  | $90 \%$ RH or less (No condensation) |
| Insulation resistance |  | Between all external terminals and the case: $50 \mathrm{M} \Omega$ ( 500 VDC ) |
| Weight |  | 1050 g (Screw mounting), 1100 g (DIN rail mounting) |

*1 Do not use a power supply with inrush current protection for the motor drive power and motor control power supply.
*2 Power consumption depends on the actuator connected. Refer to the actuator specifications for further details.
*3 Applicable to non-magnetizing locks
*4 EtherNet/IP ${ }^{T M}$ is a trademark of ODVA.

Control power supply connector

Wiring Example 2

| Parallel I/O Connector | * When you connect a PLC to the I/O 1 or I/O 2 parallel I/O connector, use the I/O cable (JXC-C2- $\square$ ). |
| :--- | :--- |
| $*$ | The wiring changes depending on the type of the parallel I/O (NPN or PNP). |

## I/O 1 Wiring example

NPN JXC73

## I/O 1 Input Signal

| Name | Details |
| :---: | :---: |
| +COM1 <br> +COM2 | Connects the power supply 24 V for input/output signal |
| IN0 <br> to <br> IN8 | Step data specified Bit No. <br> (Standard: When 512 points are used) |
| IN9 | Step data specified extension Bit No. <br> (Extension: When 2048 points are used) |
| IN10 | Instruction to return to origin |
| SETUP | Operation is temporarily stopped |
| HOLD | Instruction to drive |
| DRIVE | Alarm reset and operation interruption |
| RESET | Servo ON instruction |
| SVON |  |

## PNP JXC83

| OUT0 | 10 | Load |
| :--- | :---: | :---: |
| OUT1 | 30 | Load |
| OUT2 | 11 | Load |
| OUT3 | 31 | Load |
| OUT4 | 12 | Load |
| OUT5 | 32 | Load |
| OUT6 | 13 | Load |

| -COM1 | 19 |  |
| -COM1 | 38 |  |
| -COM2 | 20 |  |
| -COM2 | 39 |  |
| -COM2 | 40 |  |

## I/O 1 Output Signal

| Name <br> OUT0 <br> to <br> OUT8 | Details |
| :---: | :---: |
| BUSY <br> (OUT9) | Outputs the step data no. during operation |
| AREA <br> (OUT10) | Outputs when all actuators are within the area output range |
| SETON | Outputs when the return to origin of all actuators is completed |
| INP | Outputs when the positioning or pushing of all actuators <br> is completed |
| SVRE | Outputs when servo is ON |
| *ESTOP *1 | Not output when EMG stop is instructed |
| *ALARM *1 | Not output when alarm is generated |
| -COM1 <br> -COM2 | Connects the power supply 0 V for input/output signal |

*1 Negative-logic circuit signal

## JXC73/83/92/93 Series

## Wiring Example 2

Parallel I/O Connector * When you connect a PLC to the I/O 1 or I/O 2 parallel I/O connector, use the I/O cable (JXC-C2- $\square$ ). * The wiring changes depending on the type of the parallel I/O (NPN or PNP).

## I/O 2 Wiring example

NPN JXC73
